Art Unit: 2655

DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kelly (5999964) in view of Lennig et al (5479488) in view of Gillick et al (6029124) in further view of Eisdorfer et al (5475733).

As per claims 1,7,13,14,19,20,25, Kelly (5999964) teaches an ACD (col. 3 lines 40-50) detecting and routing calls (col. 12 lines 25-55), with optional voice input (col. 5 lines 58-62). Kelly also teaches call distribution based on the language of the call (col. 12 lines 50-55). Kelly (5999964) does not go into the specifics of the call routing based on language. Lennig et al (5479488) teaches a call distributor comprising detecting a call (col. 4 line 13 − col. 5 line 14), sampling an audio greeting of the call (col. 6 lines 19-43), using lexemes based on language, location, and business name based upon the input from the user after prompting (col. 5 lines 53-61 → the user's first response to a prompt is considered to be the 'initial', or first response of the user), and fitting a plurality of audio templates to the sampled greeting of the call (as comparing and calculating probabilities

Art Unit: 2655

in the comparison process -- figs 3a,3b; col. 6 lines 35-42, col. 8 line 10 - col. 10 line 35). Lennig et al (5479488) teaches language determination during the call processing (col. 6 lines 1-18, Fig. 3a, subblocks 302-308). Therefore, it would have been obvious to one of ordinary skill in the art of call processing to modify the teachings of Kelly (5999964) with audio call sampling because it would advantageously note call features that could be added to the caller's profile (Lennig, figs 3, col. 8 line 10 - col. 10 line 35). The combination of Kelly (5999964) in view of Lennig et al (5479488) teaches customer based language selection (Lennig et al (5479488)), and not based upon speech recognition. However, Gillick et al (6029124) teaches a language selection technique based upon recognized input speech (col. 19 lines 30-41). Therefore, it would have been obvious to one of ordinary skill in the art of language selection to modify the teachings of combination of Kelly (5999964) in view of Lennig et al (5479488) with automated speech recognized based language selection because it would advantageously provide an improved performance in the automated recognition aspect of the system (Gillick, col. 7 lines 36-52).

The combination of combination of <u>Kelly (5999964)</u> in view of <u>Lennig et al</u> (5479488) in view of <u>Gillick et al (6029124)</u> teaches an ACD performing automatic language recognition and routing the call based on language, but does not explicitly teach routing the call to an agent based upon the language of the call, however, <u>Eisdorfer et al</u> (5475733) teaches identifying the language of the user and routing to the call agent associated with that language (Fig. 2, col. 2 lines 20-30). Therefore, it would have been obvious to one of ordinary skill in the art of call routing to adapt the combination of

Art Unit: 2655

Kelly (599964) in view of Lennig et al (5479488) in view of Gillick et al (6029124) with language based call routing to an agent because it would adapt their system for multilingual support, as well as efficiently using communication assistant resources (Eisdorfer, col. 2 lines 4-12).

As per claims 2,8,26,27 <u>Gillick</u> teaches audio language templates (col. 7 lines 40-49).

As per claims 3,9, <u>Lennig et al (5479488)</u> teaches routing the call based on language of the call (Fig. 3a, subblock 303,304).

As per claims 4,10, <u>Lennig et al (5479488)</u> teaches operator agent selection (fig. 3b, subblocks 322-324).

As per claims 5,11, Lennig et al (5479488) teaches default branching to the operator when language and recognition is not clarified (fig. 3b, subblocks 322,324).

As per claims 6,12, <u>Gillick</u> teaches multiple language stored samples (col. 19 lines 35-40).

As per claims 15,21,28 <u>Lennig et al</u> teaches recognizing the user as a repeat customer and accessing information about the repeat user (col. 4 lines 47-49, wherein the

Art Unit: 2655

stored information about a customer implies a repeat user, ani – col. 5 lines 10-14, and the language (col. 5 lines 5-10)). (Kelly also teaches routing based ani -- col. 3 lines 45-50).

As per claims 16, 22, <u>Lennig et al</u> teaches storing an associated name of the user (col. 4 lines 45-50, referring back to col. 3 lines 49-53).

As per claims 17,23,31,32 <u>Lennig et al</u> teaches marketing information with the customer (col. 4 lines 56-60 -- lennig teaches billing data, which monitors usage and sales numbers -- which is component of marketing data).

As per claims 18,24,29,30 <u>Lennig et al</u> teaches determining based on localities (col. 10 line 63 – col. 11 line 4).

As per claims 29 and 30, <u>Kelly (5999964)</u> teaches name and geographic locations information (col. 3 lines 50-65).

Response to Arguments

3. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2655

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Please see the related art listed on the PTO-892 form.

5. Any response to this action should be mailed to:

Commissioner of Patents and Trademarks Washington, D.C. 20231

or faxed to:

(703) 872 9314,

(for informal or draft communications, please label "PROPOSED" or "DRAFT")

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington. VA., Sixth Floor (Receptionist).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Opsasnick, telephone number (703)305-4089, who is available Tuesday-Thursday, 9am-4pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ms. Doris To, can be reached at (703)305-4827. The facsimile phone number for this group is (703)872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group 2600 receptionist whose telephone number is (703) 305-4750, the 2600 Customer Service telephone number is (703) 306-0377.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
